

Steps in Machine Learning Projects

Steps in a full machine learning project

Libraries and packages need for the Machine Learning project

Tools you can use

Machine learning base creation = Anaconda, MiniConda, JupyterNotebook(python coding)

For Data analysis = pandas, matplotlib and NumPy

For modelling\Machine Learning = TensorFlow, PyTorch , scikit learning , CatBoost , dmlc XGBoost

We ll install and learn about all the mentioned libraries\packages for machine learning project creation.
